

What is a Red Eye™?

The Red Eye™ is a “NON-ZOOM THROUGH” wide angle adapter, made for a television camera lens with a 82mm, 77mm, 72mm or 58mm thread mount, equipped with a macro or back focus adjustment. The Red Eye™ wide angle adapter is about the size of a filter and WEIGHS LESS THAN 100 GRAMS.

With this adapter, the angle of view on most camera lenses will be INCREASED BY 30% with the .7x and 50% with the .5x

Bulk and weight have been eliminated by using a durable and compact, HIGH INDEX, HIGH CLARITY optical material which substantially reduces the size of the lens.

All the The Red Eye™ wide angle adapters feature a multi-layer ANTI-REFLECTIVE coating to INCREASE LIGHT TRANSMISSION to close to 100 per cent for optimum image clarity, contrast and sharpness. In addition, coatings offer an extra degree of scratch resistance and improve water repellence.

The lens housing is ANODIZED ALUMINIUM and uses standard 58mm, 77mm or 82mm thread mount. Each lens comes with its own HAND-CRAFTED PADDED LEATHER CASE.

You can use your existing lens hoods and matte boxes. With the lens hood already attached to your lens, simply screw the Red Eye™ adapter on your lens.

The Red Eye™ is deceptively small, but IT DOES THE JOB!

Why a Red Eye™? Because!

The Red Eye™ was designed by a cameraman for cameramen.

Every cameraman will eventually be in a location where they need a wide shot but can't get one because of space limitations. This situation requires a temporary wide angle adapter.

The Red Eye™ works well in shots where a dramatic angle is needed to increase perspective, to accentuate the effects of fast motion, or on shots that float through a room on a steadicam, to smooth movement.

Until now, the cost of buying such a wide angle adapter or to equip a large camera department with them would be impractical. The bulk and weight of existing adapters make them difficult to carry around at all times.

This quality product, made in Calgary, Canada, solves both the cost and weight problems, making the RED EYE™ both practical and giving excellent quality.

What users say about...

The Red Eye™

"I am delighted with the Red Eye it gets me pictures in places I didn't dare to go before."

Shay Casserley, Ireland
